

# Change Your Default R Library Folder

## Step 1:

- a) Go to the folder:  
[\\vhpalmpncptsd1\shared\research\TeamPSD\quant\\_workgroup\r](#)
- b) Copy the zipped file 3.5 onto your Desktop
- c) Unzipped the copied 3.5 file into a folder you name as **"Rpackages"** or any other name of your choice on your desktop
- d) The unzipped 3.5 folder will appear within it

# Change Your Default R Library Folder

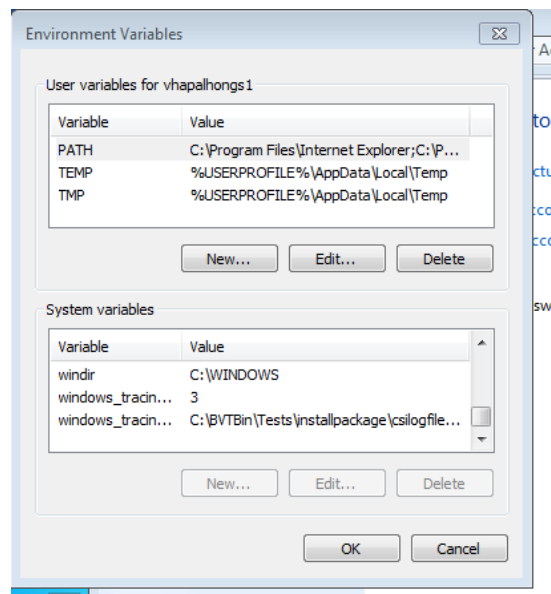

## Step 2:

- Go to the Start and select Control Panel
- Navigate to: Control Panel\User Accounts\User Accounts
- Select "Change my environment variables"
- An "Environment Variable" window will pop up

## Step 3:

- Select "New..." in the middle of the Environment Variables window
- A "New User Variable" window will appear

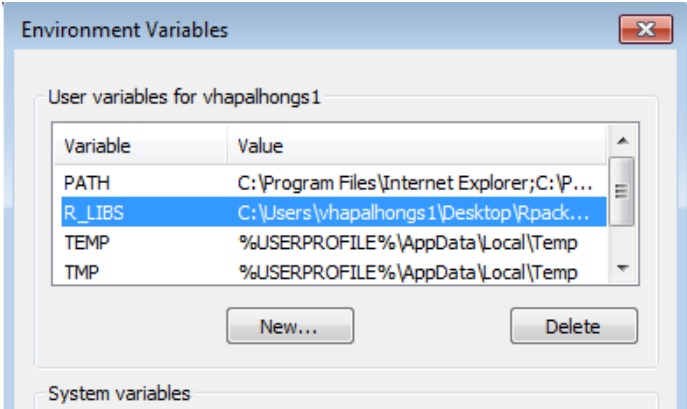

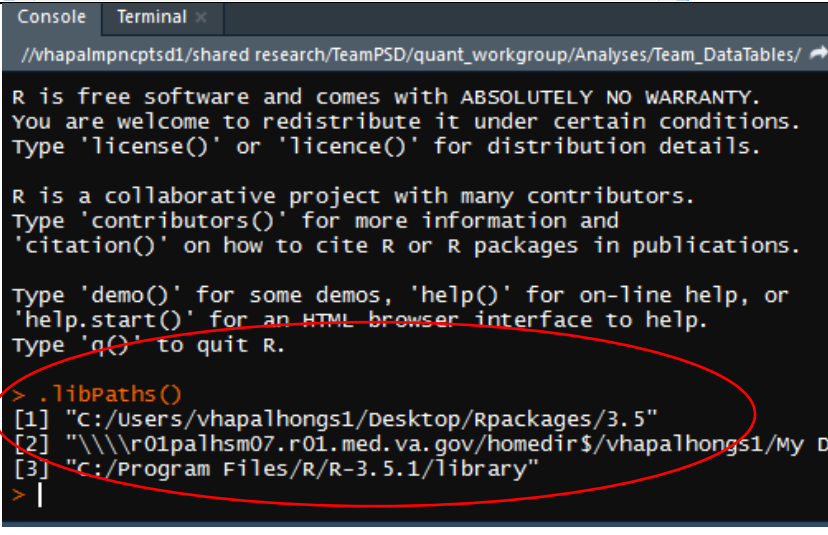

## Step 4:

- In the field "Variable name" enter: **R\_LIBS**
- In the field "Variable value" enter the folder path to the unzipped 3.5 folder on your Desktop
- Click okay

## Change Your Default R Library Folder

<p>d) You should now see in the User variables for your account, R_LIBS with a value starting with C:\Users</p> <p><b>**It's really important that it's start with the C drive as RStudio has difficulty recognizing library path on network drives</b></p>	
<p>Step 5:</p> <ol style="list-style-type: none"> <li>Launch RStudio</li> <li>Type into the R console: <b>.libPaths()</b></li> <li>The first output you should see is the path to your desktop library—the path that you entered into variable value in the previous steps</li> </ol>	
<p>Step 6:</p> <ol style="list-style-type: none"> <li>Enter into the R console: <b>install.packages("tidyverse")</b></li> <li>Noticed that the first line indicates that it is installing the package to your new library path on the Desktop</li> </ol>
