Iculated usin pt/wk) f the numbe en for psych vk) of the propo	er of new patients starting otherapy in one year who rtion of the team's patient	npleted each week with t with the team per week, have never had a psycho s with alchohol use disord	he team in each service over calculated from the number therapy visit with this team der (AUD), calculated from s of AUD within their entire
no complete (pct)	rtion of the team's patient d visits charted with a prir	nary diagnosis of DEP wit	calculated from the cohort hin their entire psychotherapy
patients wh y engageme of the propo m the cohor		d with a primary diagnosi s with post traumatic stre ed visits charted with a p	s of OUD within their entire ess disorder (PTSD),
ho complete portion who patients who		py visit within their first th seven psychotherapy visi	
this is the p eturn for at l	roportion who do not com least one more psychother	nplete any more psychoth rapy visit after three mont	herapy visits within three ths ((i.e., patients who return
chotherapy ho complete portion of p	e at least two to seven psyc atients who complete eigh	chotherapy visits within th	hree months (i.e., initiators), visits within three months
ho complete), this is the p eturn for at l	te a timely dose). (pct) e at least two to seven psytoroportion who do not cor least one more psychother	mplete any more psychot	herapy visits within three
pct) ho complete	e at least two to seven psyc	-hotherapy visits within th	heir first three months

	longer term would free up more slots for new patients.
	Our Hypothesis
	If we made no changes, patients would be seen longer than optimal, k like. and we would have fewer appointments available than we like.
	Our Findings
	If we make no new decision in our team, the hours for services will rem the next two years.
$\bigotimes_{\overline{\mathbf{X}}} \bigotimes_{\overline{\mathbf{X}}}$	Our Decisions
	We expect patients get better faster, and not be engaged for as long, v would free up more slots for new patients
Experime	nt 1
	Our Question
	We are struggling with psychotherapy because we have so many patie spresd out far (coming in once a month or so, aka "RVI"). What happen in for concentrated episodes of psychotherapy (RVI + Engagement Du expect they would get better faster, and not be engaged for as long, we longer term would free up more slots for new patients.
	Our Hypothesis
